

Strings with Format method and Interpolation

Gautham Kolluru

Adding values too strings dynamically => during runtime by using `format()` and interpolation.

`format()`

format()

1. without using Indexes

Ex: `'{} is {} Text'.format('This', 'some')`

format()

1. without using Indexes

Ex: `'{} is {} Text'.format('This', 'some')`

2. Using Indexes

Ex: `'{1} is {0} Text'.format('some', 'This')`

Interpolation

Introduced with Python 3.6. and is very convenient

Ex: `name = 'Python'`

`f"The name of the student is {name}"`
