

Truthy & Falsy Values

Gautham Kolluru

Truthy values

Def: any expression or an entity that gets evaluated to a Boolean true

ex: True, not False, any comparison operation that gets evaluated to a True and any variable that is referring to anything but a None or a Null value

Falsy Values

Def: any expression or an entity that gets evaluated to a false

ex: False, not True, any comparison that gets evaluated to a False
and any variable that is precisely referring to None or Null value
